

CAD Technician / CAD Specialist – Studio TK

About the Role

We are looking for a hands-on, detail-oriented CAD Technician to join our manufacturing team. This role is a perfect fit for someone who loves the blend of technical precision and production—someone who enjoys seeing a design start as a concept and evolve into a finished product on our factory floor.

While you'll be working across various manufacturing processes, this position will primarily focus on supporting our textiles and upholstery team. We're happy to provide training on Lectra, Gerber and AccuMark software, so if you have a strong foundation in CAD and an interest in growing your skills within upholstery manufacturing, we'd love to talk.

What You'll Be Doing

- **Design & Development:** You'll be creating and adjusting 2D/3D drawings, layouts, and production markers based on initial sketches and specifications. You'll be the go-to person for ensuring our designs are both aesthetically on-point and perfectly manufacturable.
- **CNC & Technical Support:** You'll translate designs into machine language (G-code) using our CAD/CAM software. You'll also play an active role in optimizing toolpaths to help us reduce waste and improve overall production efficiency.
- **Quality Assurance:** You'll be hands-on with production outputs, inspecting components for quality and troubleshooting any design issues that come up on the floor.
- **Team Collaboration:** You'll work closely with our design, sewing, and upholstery teams, as well as our production leaders. Effective communication is key here, as you'll be a vital link between the design process and the reality of the shop floor.

What We're Looking For

- **Experience:** 2–5 years of relevant experience in a manufacturing setting, specifically with CAD drafting or CNC work.
- **Technical Skills:** Proficiency in AutoCAD, SolidWorks, or similar software. You should be comfortable reading blueprints and complex technical drawings.
- **Background:** Experience in woodworking, cabinetry, millwork, or furniture/textile manufacturing is a major plus. Knowledge of Microvellum, Cabinet Vision, or Alphacam is also highly valued.
- **Mindset:** We value self-starters who can manage their own priorities. You should be someone who takes pride in continuous improvement and enjoys solving the "puzzle" of production.

Why Studio TK?

This is a great opportunity for a CAD professional to pivot into the specialized world of textile and upholstery manufacturing. We're a collaborative, fast-paced team that prizes innovation, precision, and high-quality craftsmanship.

Compensation & Benefits

We offer competitive hourly pay, a comprehensive benefits package, and consistent opportunities for professional training and development in a stable, team-oriented environment.
